Theme Manual

Teoro - WordPress Theme

Thank You :)

Thanks for purchasing our theme. We really appreciate your support and trust in us. We worked hard to make the Teoro WP theme easy to edit as much as possible. Hopefully, you will enjoy using it.

Have fun!

How To Install?

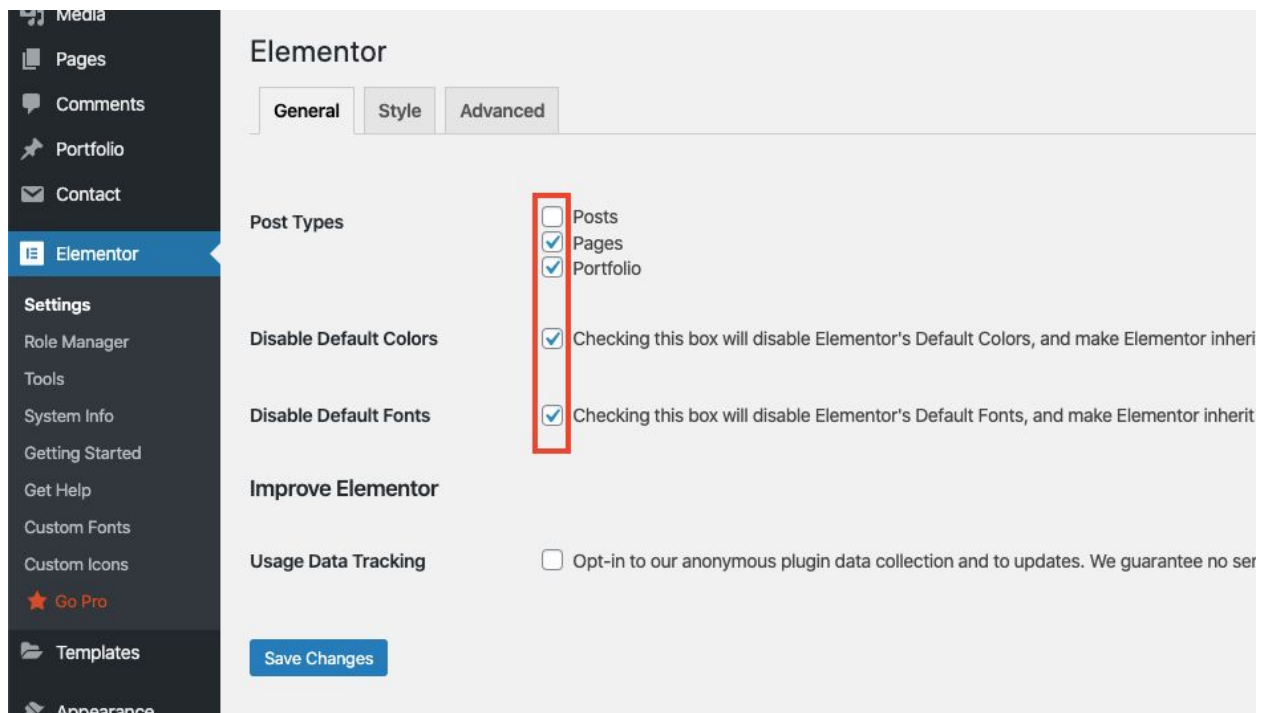

Once you have the zip archive ready, you need to go to your dashboard, which is www.yourwebsite.com/wp-admin and go to **Appearance > Themes > Install Themes** and, in the top menu, select **Upload**. Now, select the zip archive and just install it normally.

*Note - Theme is placed in **“Teoro WP - THEME”** folder and you need to upload a zip file from that folder (zip file called **teoro-wp.zip**)
Also, there is a Child theme available placed in same folder (zip file called **teoro-wp-child.zip**)

After installing the theme, you will get alerts of required plugins **CocoBasic - Teoro WP, CocoBasic - Teoro Elementor Widgets, Elementor** and **Contact Form 7**. You need to install and to activate them.

Set Up Elementor

After you have installed plugins, you need to set up some settings in Elementor. Go to **Dashboard > Elementor > Settings > General** and check options like on image bellow:

Don't forget to click **"Save Changes"**.

Import Content

This theme comes with our dummy/demo content which can be imported directly on your website to achieve the same look as our demo. To import our content go to your WordPress admin page dashboard and select **Tools > Import** and then choose WordPress option.

Here is a small video tutorial on how to install and import demo content.

<https://youtu.be/ssEjY2rb1Zw>

Demo Content is placed in the “Teoro WP - DEMO CONTENT” folder. Theme comes with multiple demo content files - **demo1, demo2**, etc... You need to **import just one** demo content file.

After you have imported dummy/demo content go to **Dashboard > Settings > Reading** and set **Front page displays: “A static page”** and select **OnePage** for **Front page**. For **Posts page** select **Blog**.

Creating Menu

In order to create a menu, go to **Appearance > Menus**. You can see on the image below an example of how the menu can look like.

Menu structure

Menu Name

Drag the items into the order you prefer. Click the arrow on the right of the item to reveal additional configura

| | |
|--------------|---------------|
| Home | Custom Link ▼ |
| About | Custom Link ▼ |
| Portfolio | Custom Link ▼ |
| Cover Latter | Custom Link ▼ |
| Skills | Custom Link ▼ |
| Education | Custom Link ▼ |
| Experience | Custom Link ▼ |
| Contact | Custom Link ▼ |

Menu Settings

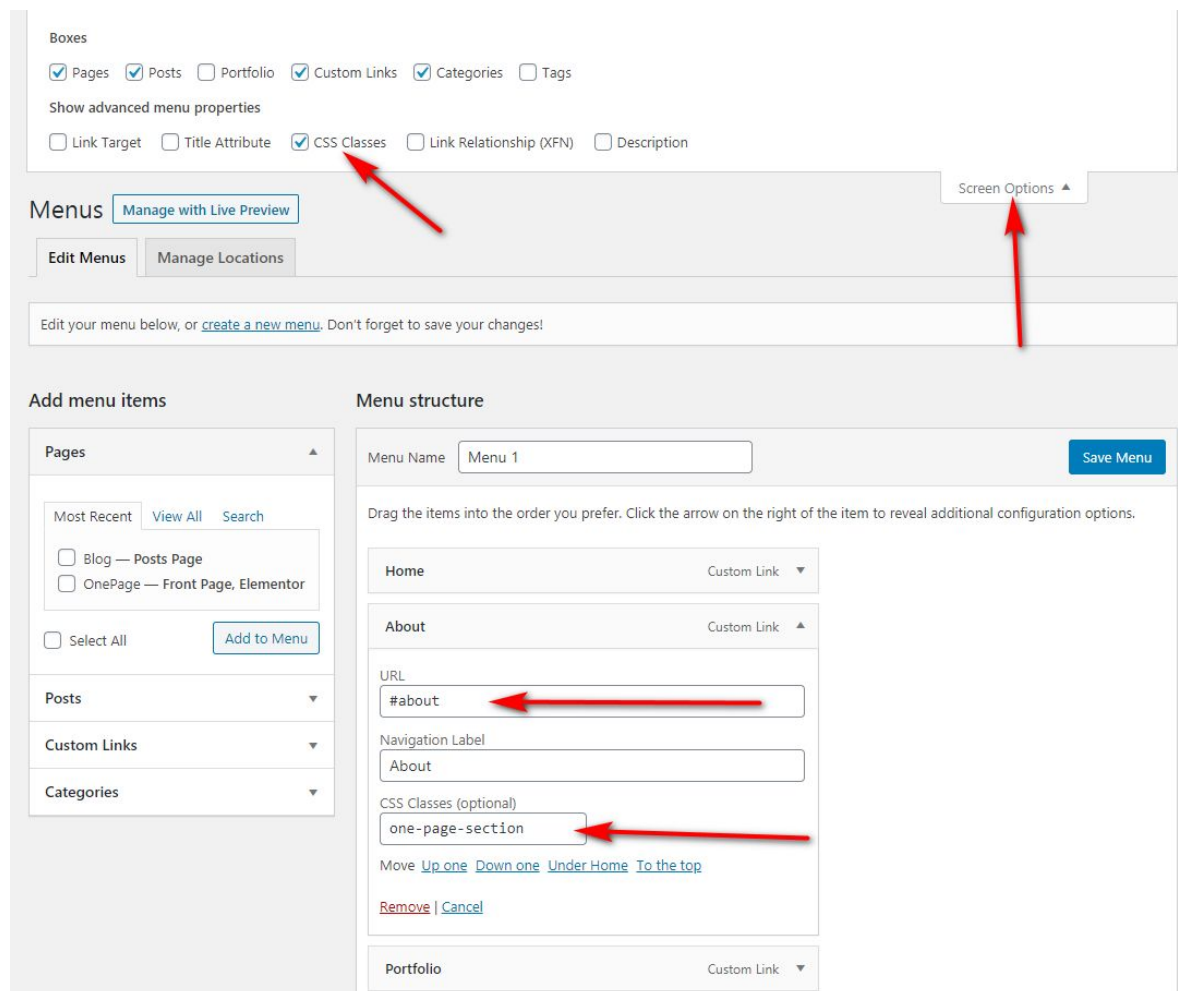

Auto add pages ☐ Automatically add new top-level pages to this menu

Display location ☒ Main Menu

* Don't forget to check "**Main Menu**".

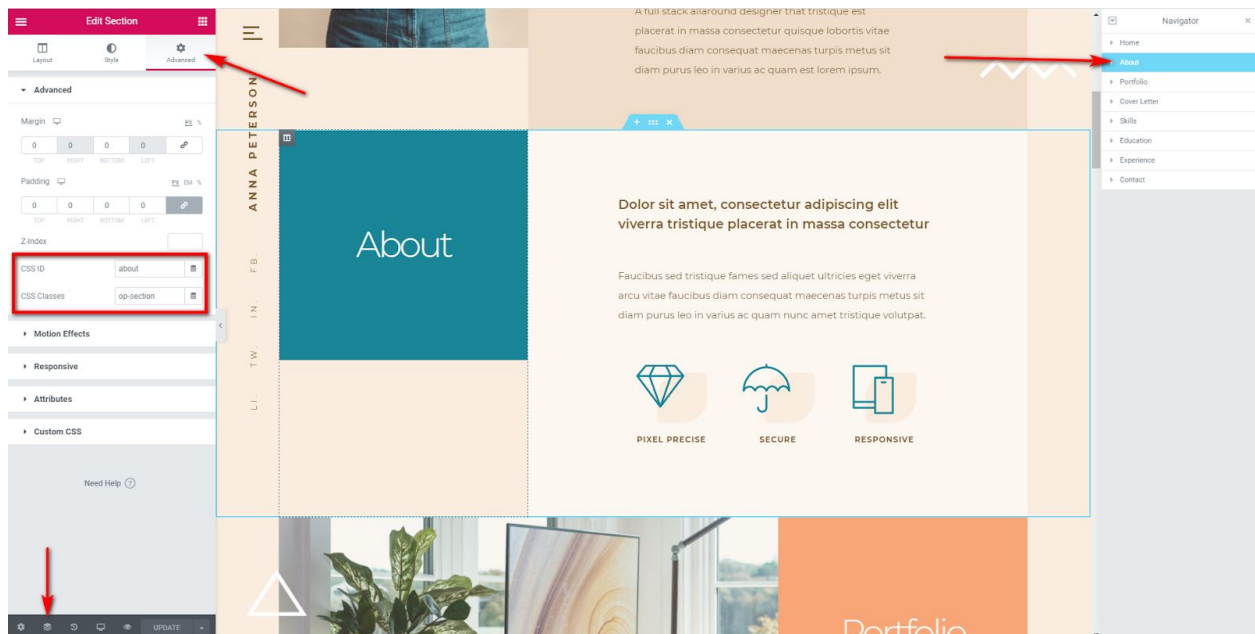

Set / Edit Menu Items and Sections in OnePage

To set/edit Menu items in OnePage you need to add custom class **"one-page-section"** and link/URL to set in format **"#PageIdSlug"** (example: #service, #portfolio, #contact ...). Take a look at image how to enable option for custom class and how to set it:

Also, the important part is to have a section in OnePage with an ID slug name like one which you have set in the menu (in our example it is **"about"**).

Take a look at the image below how to set/edit ID slug for section in OnePage:

Important part is that for CSS ID (ID slug) you set just a slug name without “#”.

Also, each section in OnePage must have a class called **op-section**.

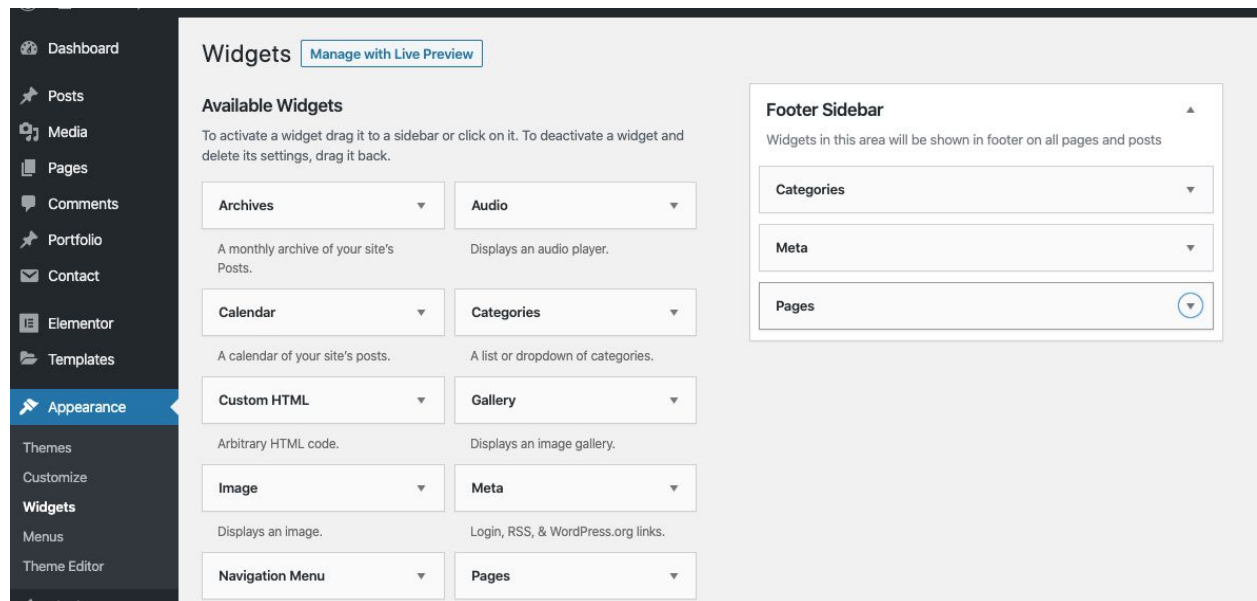

Sidebar (Footer) Widget

***Note** - on our demo we don't use footer widget

To set/edit widgets in footer go to:

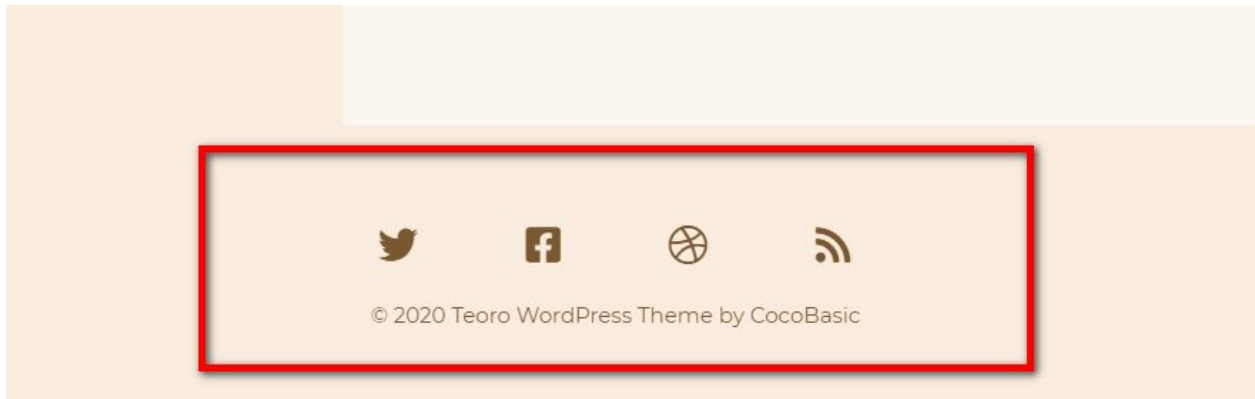

Dashboard > Appearance > Widgets

Here is how it looks in the widgets area.

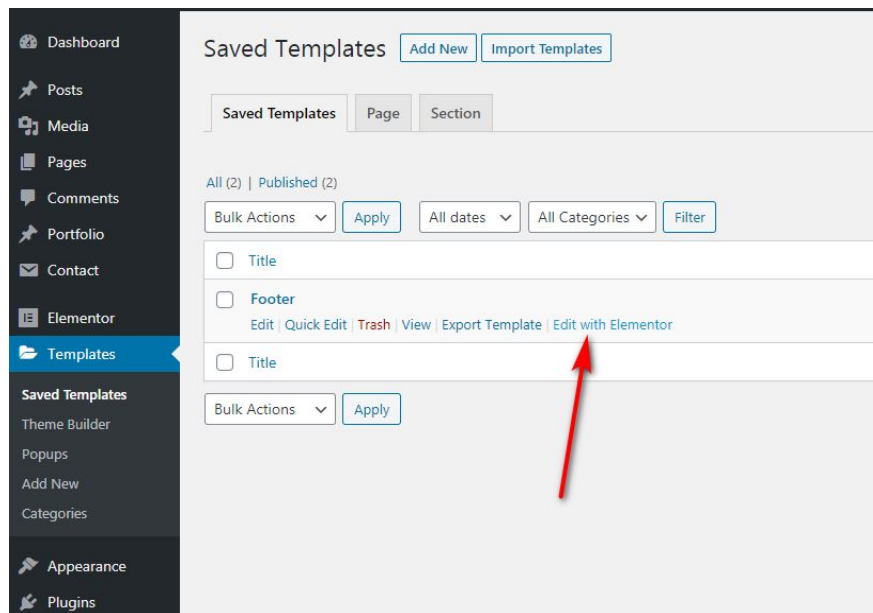

Footer Content

On our demo footer content looks like this and it is also created with Elementor:

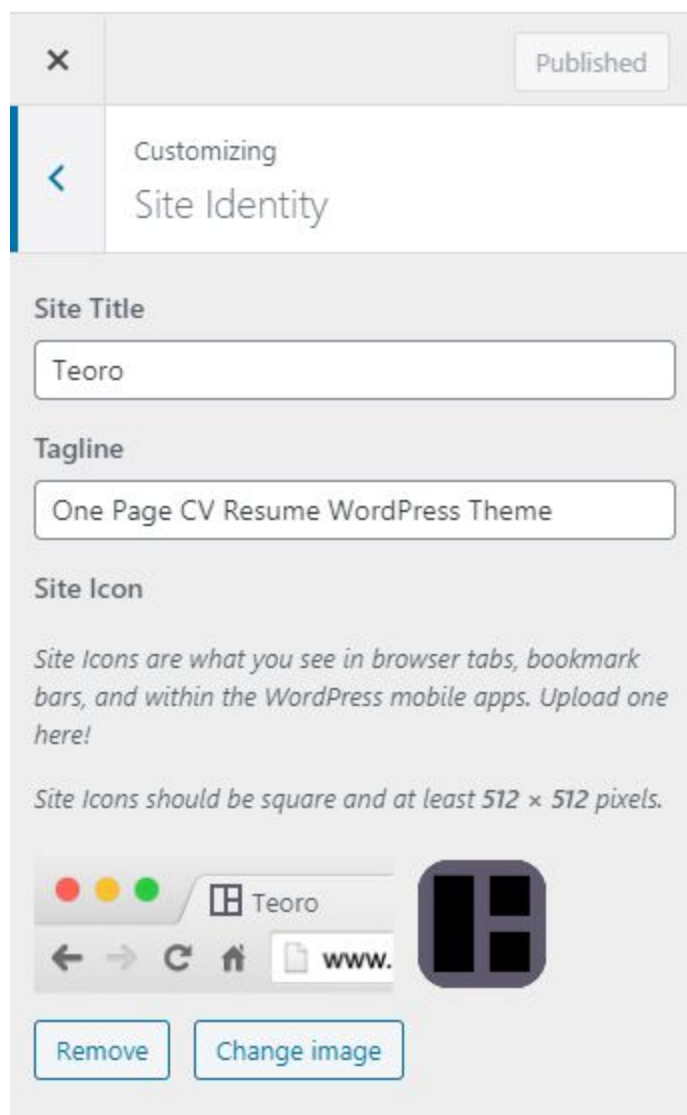

To edit this content, go to **Dashboard > Templates > Saved Templates**

Theme Customization

To open customizer click on ***Dashboard > Appearance > Customize***

Site Title, Tagline and Site Icon Customizing

Content Editing

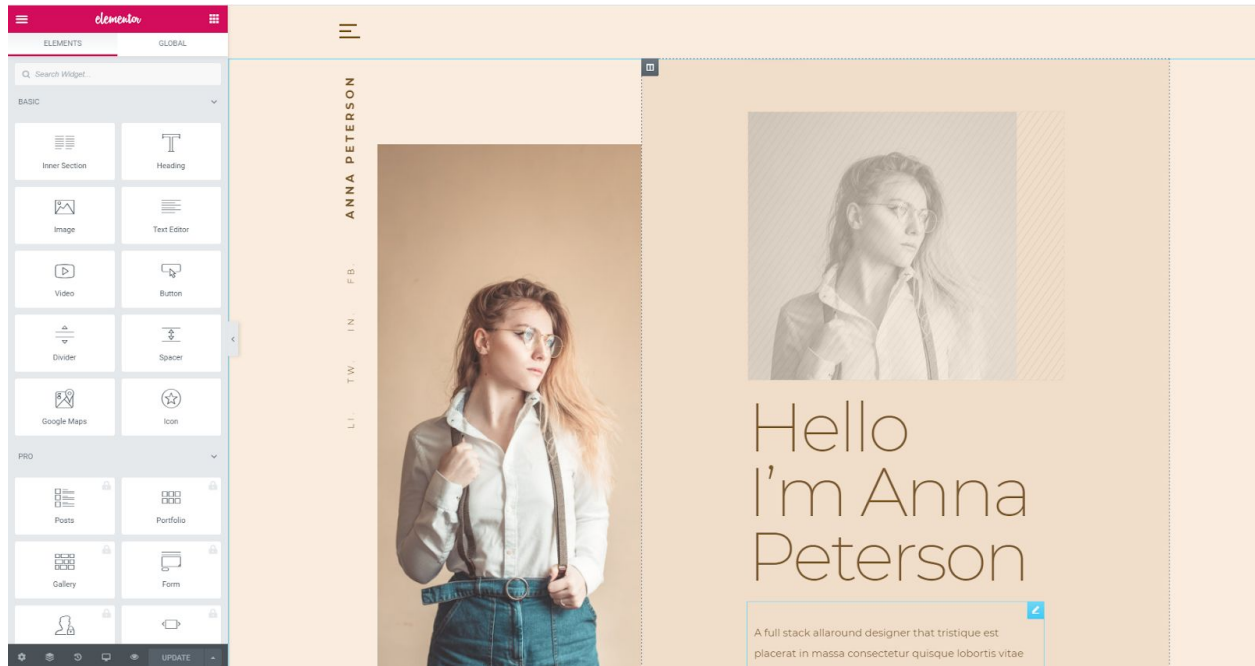

To edit content just open **OnePage** and replace the existing content with your own (text, images, videos).

After importing demo content, you will have pages like on image.

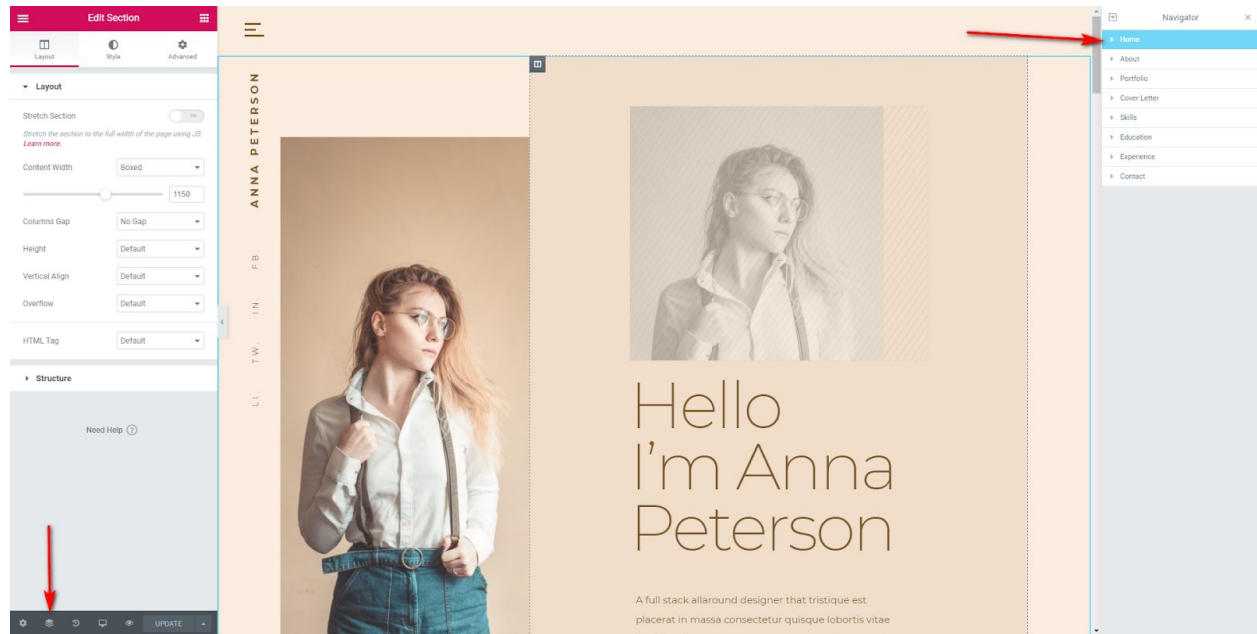

OnePage

This page is created using the Elementor. When you start to edit with Elementor this page you will get this:

In this page are placed all sections which are part of the Front / OnePage page (like Home, About, Portfolio, Skills, Contact ...).

I am recommending to enable “**Navigator**” option before you start to edit the content because it will be much easier to go through the Sections. Take a look at the image below how to enable **Navigator** and how you can easily select each section:

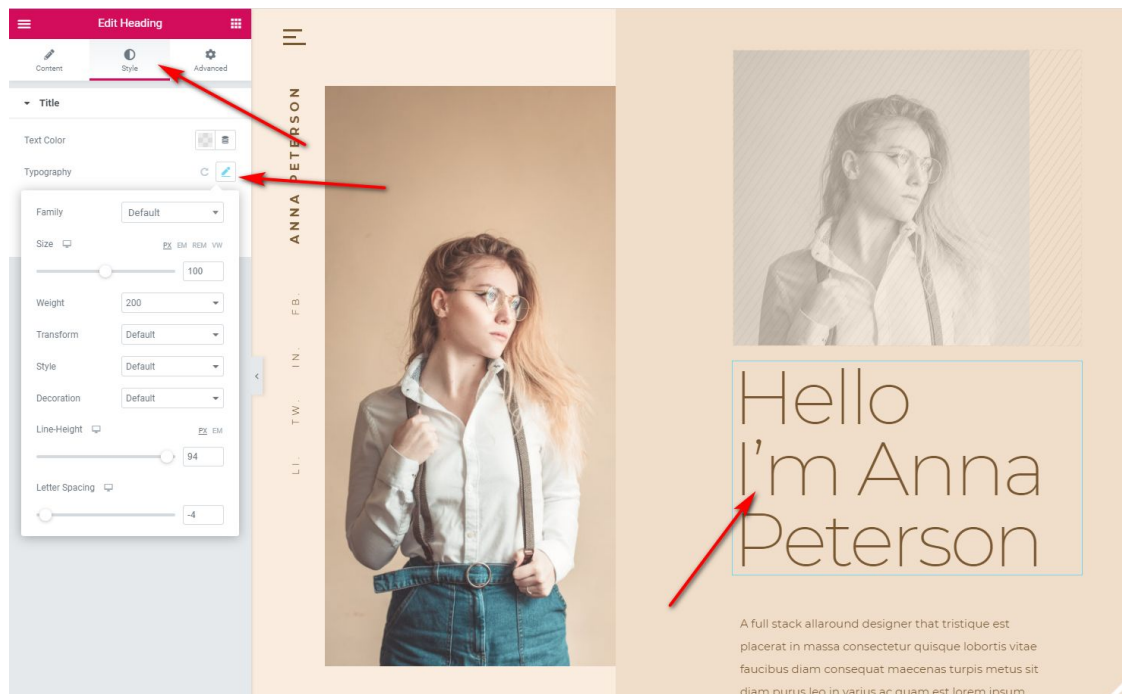

All content is created using Elementor and it should be easy for you to edit content - just click on element which you want to edit and in the left part of the screen you will get the area where you can change the content (text, images, icons...) or some style (like font family, color, margins/padding).

Here is an example of how to change the big intro text and image on the Home section. Click on the text and in the left part of the screen you will get this area:

In case that you want to set some other font family or size or maybe you want to change the color of the text, you need to use the **Style** tab.

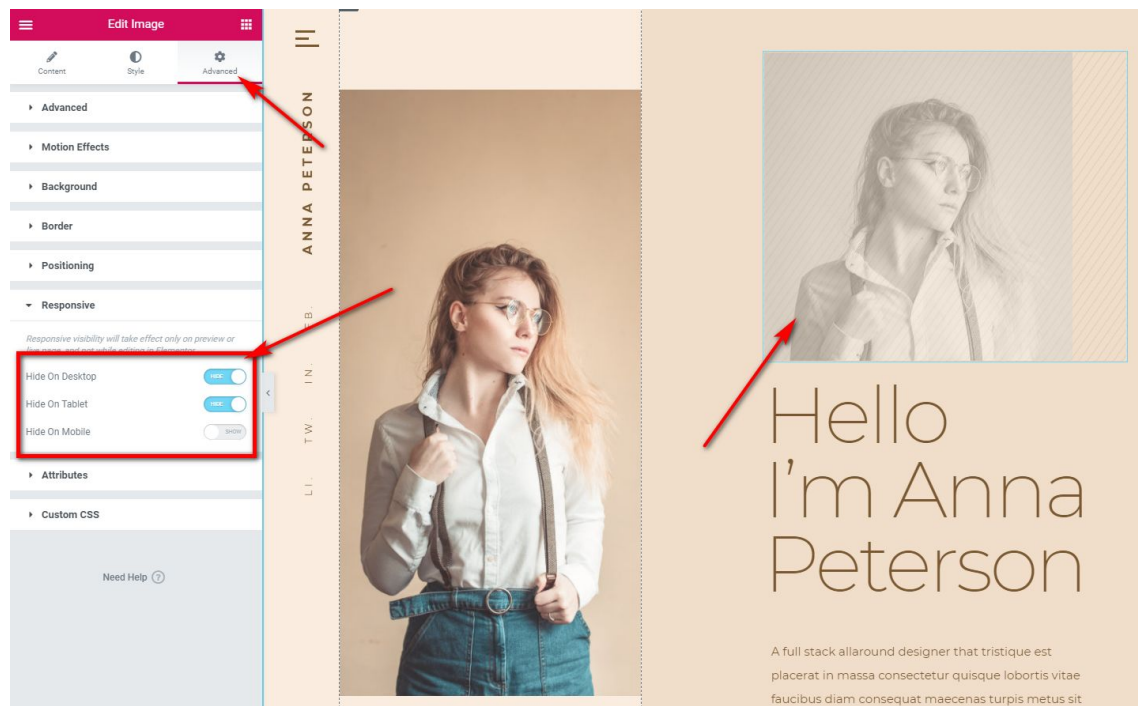

To change the big image just click on it:

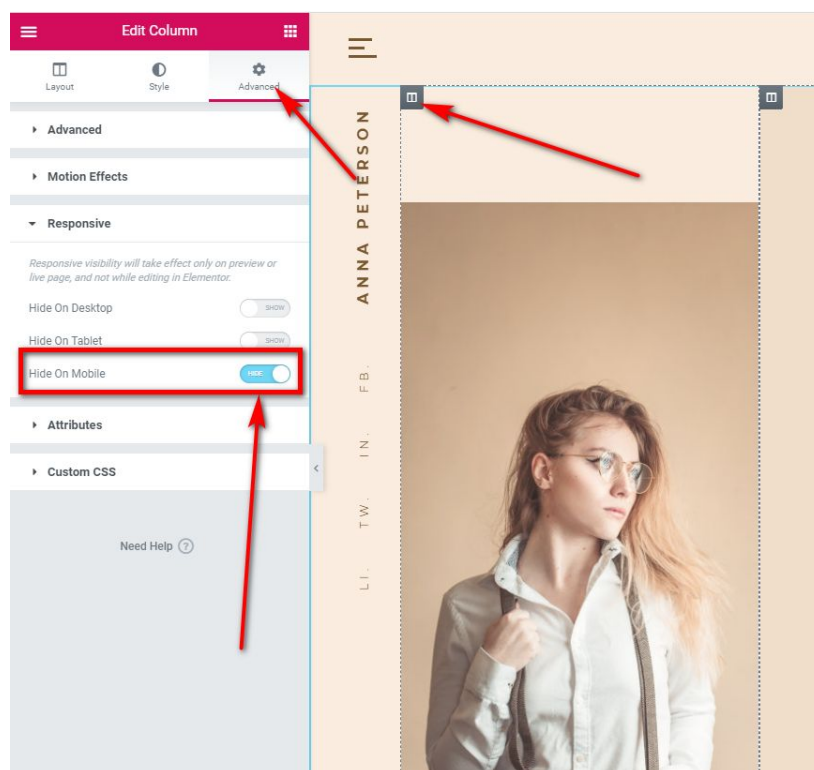

As you see, there is one extra image (smaller one) which is “hidden”. This image is not visible on big resolutions (PC and Tablet) but it is visible on small resolutions (Phone). On the other side, the left column (where a big image is placed) is visible on PC and Tablet resolutions but not on Phone resolutions.

Take a look at the images below how we control when some parts (in this case a small image and a whole left column) will be visible.

A small image:

Column:

On the Home section we also have an animated zig-zag line (we have more animated elements on other sections and all of them can be edited in the same way which I will explain now).

Click on the zig-zag line and in the left part you will get Content part where you can change the image (so, you can set any image there).

Also, there is an option to set a custom position for this image. Take a look on the image below where you can control the position (top/bottom and left/right) of the image. Also there you can set Horizontal/Vertical orientation.

All that is about how to edit image and position of image. Now, I will explain how to change the animation. We have there **4** animations and all you need to do is to set/edit the class name to change the animation. The classes are:

cocobasic-left-right

cocobasic-left-down-right-up

cocobasic-rotate

cocobasic-up-down

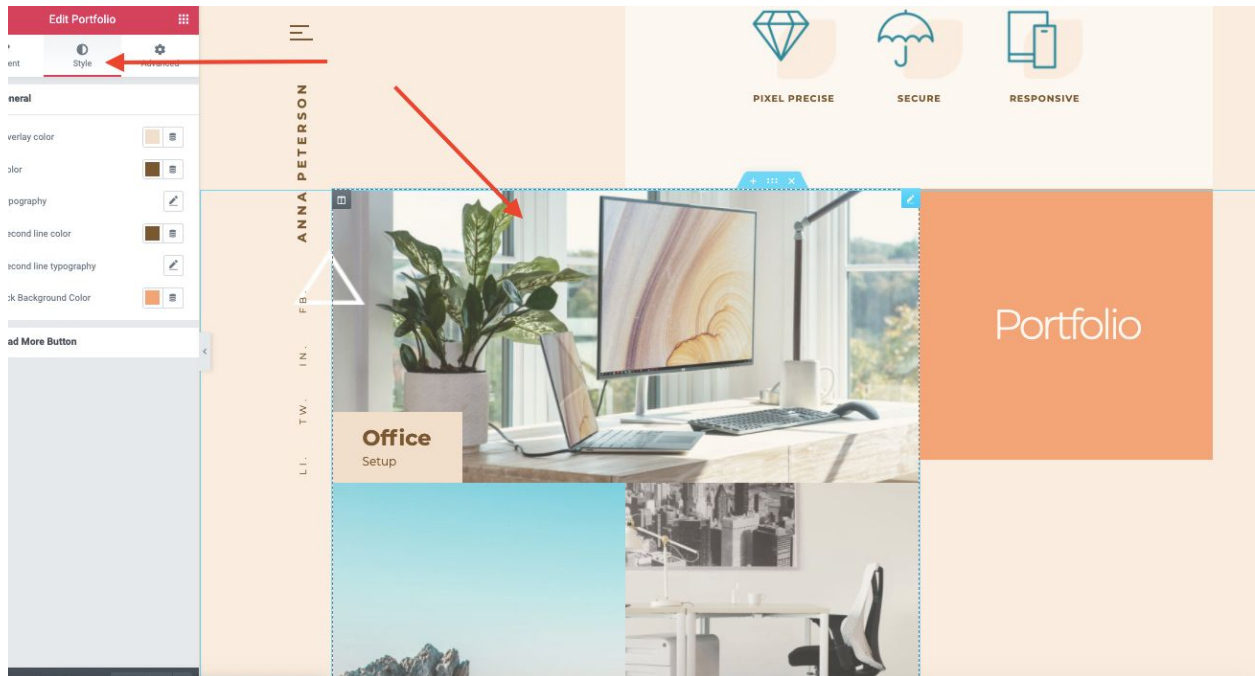

Take a look at the image below how to edit/set the class for the element.

Again, we have more animated elements like this in other sections in OnePage and each of them can be edited in the same way. Also, for each of them you can set any of 4 classes (animations), so, for example you can have a zig-zag line which is moving up-down and no left-right like in our demo.

Portfolio Section

When you edit the Portfolio section and click on portfolio items, in left part you will get area like this:

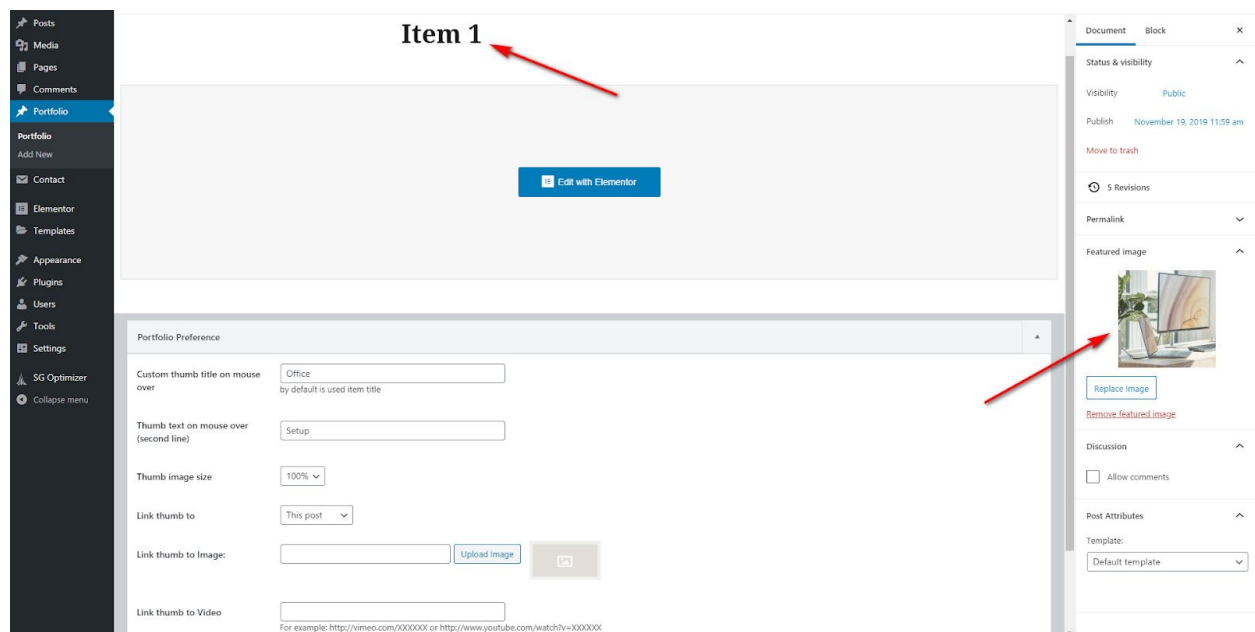

In the **"Style"** tab you have a lot of options where you can customize colors, fonts, etc...

Add/Edit Portfolio Item

To Add a new Portfolio Item you need to open

Dashboard > Portfolio > Add New

Enter a Title and after that you need to set **“Featured Image”**.

After you have set the image, you need to add/edit item content using Elementor (click on **“Edit with Elementor”**)

Also, below the editor, there is **“Portfolio Preference”**:

Portfolio Preference

Custom thumb title on mouse over

Sneakers

by default is used item title

Thumb text on mouse over (second line)

Text

Thumb image size

100% ▾

Link thumb to

This post ▾

Link thumb to Image:

Upload Image

Link thumb to Video

For example: <http://vimeo.com/XXXXXX> or <http://www.youtube.com/watch?v=XXXXXX>

Link thumb to External URL:

Set URL to external site

Here you can set “Custom thumb title on mouse over text”, size of featured image and where to link when you click on a portfolio item.

If you link to **“This Post”** when you click on a featured image it will load via ajax content on the **“Portfolio”** page.

If you link to **“Image”** you need to set **“Link thumb to image”** with image URL - it will open the image in pop-up when you click on featured image.

If you link to **"Video"** you need to set **"Link thumb to video"** with:

YouTube video in format:

<http://www.youtube.com/watch?v=XXXXXX>

or Vimeo video in format:

<http://vimeo.com/XXXXXX>

Now, when you click on a featured image it will open the video in pop-up.

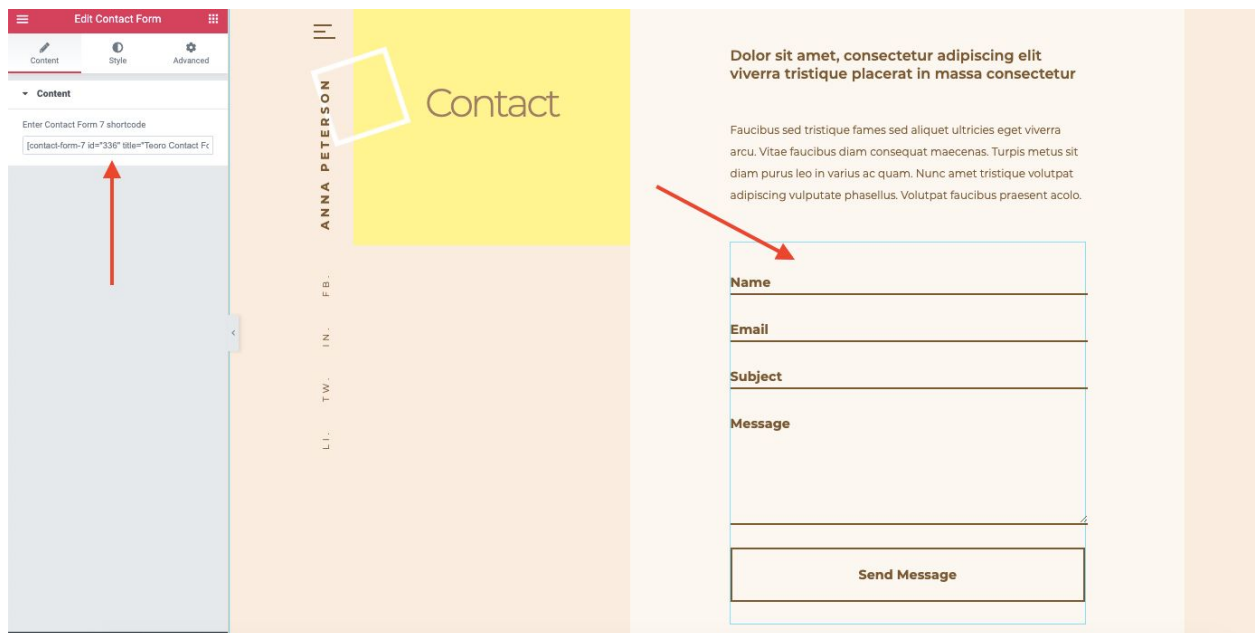

If you link to **"External URL"** you need to set URL in **"Link thumb to External URL"** in format **<http://yoururl.com>**

Now, when you click on a featured image it will open your URL.

Contact

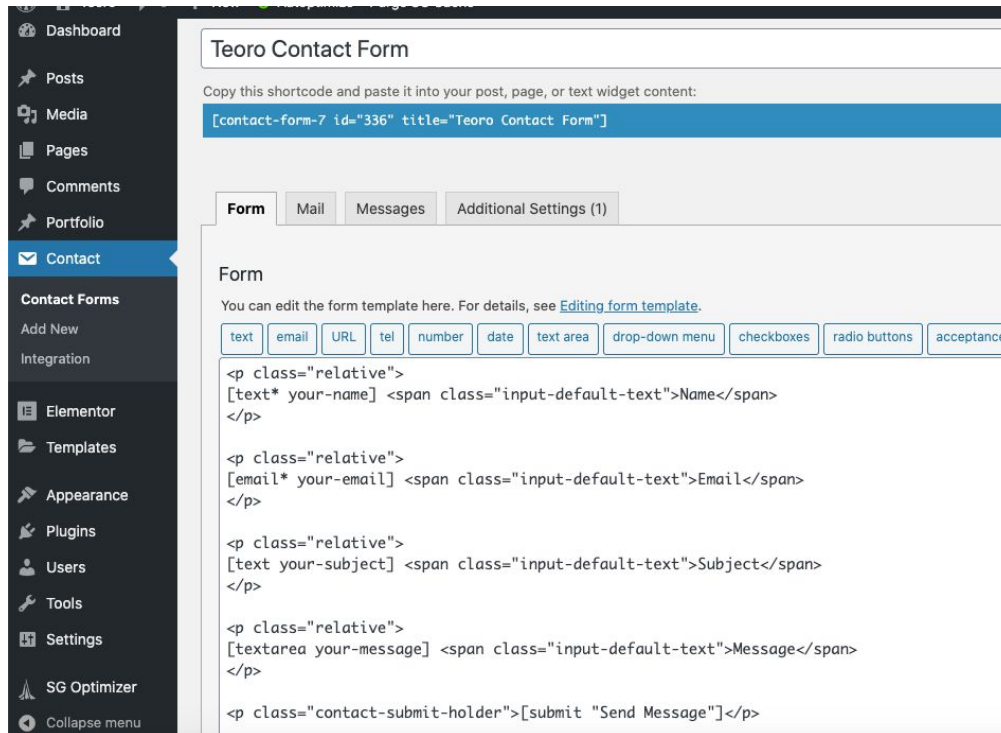

In this section you will find a shortcode for contact form. It is shortcode from **Contact Form 7** plugin which looks like this:

`[contact-form-7 id="336" title="Teoro Contact Form"]`

To set/edit your contact form you need to open **Dashboard>Contact>Contact Forms** and to edit the contact form.

Our demo code for contact form looks like this:

Code for contact form:

```
<p class="relative">

[text* your-name] <span class="input-default-text">Name</span>

</p>

<p class="relative">

[email* your-email] <span class="input-default-text">Email</span>

</p>

<p class="relative">

[text your-subject] <span class="input-default-text">Subject</span>

</p>

<p class="relative">

[textarea your-message] <span class="input-default-text">Message</span>

</p>

<p class="contact-submit-holder">[submit "Send Message"]</p>
```

Plugins

CocoBasic - Teoro WP

User interface for Teoro WP. It will add Portfolio post type in the theme

CocoBasic - Teoro Elementor Widgets

Custom widgets for Elementor used in the Teoro WordPress theme.

Elementor Page Builder

The most advanced frontend drag & drop page builder. Create high-end, pixel perfect websites at record speeds. Any theme, any page, any design.

<https://wordpress.org/plugins/elementor/>

Contact Form 7

Contact Form 7 can manage multiple contact forms, plus you can customize the form and the mail contents flexibly with simple markup.
